

**Amendments to the Specification**

Page 2, please rewrite the paragraph commencing at line 4, as follows:

A1  
-- However, many users do not discover the "OFFICE language settings" application because it is an entirely separate application program module from the "OFFICE" suite of application program modules. For example, a user must go into the "START" menu in a "WINDOWS" operating system to open the "OFFICE language settings". Thus, users often are unaware of the existence of the "OFFICE language settings" application. ("OFFICE", "WORD", "POWERPOINT", "PUBLISHER", "OUTLOOK", "WINDOWS", and "WINDOWS 2000" are trademarks of Microsoft Corporation.) --

Page 4, please rewrite the paragraph commencing at line 11, as follows:

A2  
-- Thus, it should be understood that, in one embodiment, the invention automatically searches for information in the operating system and in the way users use application program modules to obtain hints about which language settings should be enabled. The application program module determines which input locales (keyboards, Input Method Editors (IMEs), ~~AIMEs~~, etc.) are installed as well as which scripts in the operating system have been installed by the user and turns on all these languages as editing languages in the application program modules. An application program module may also enable any languages that the user applies to any piece of text applied to a document. --
